

HIPAA Compliance Experts

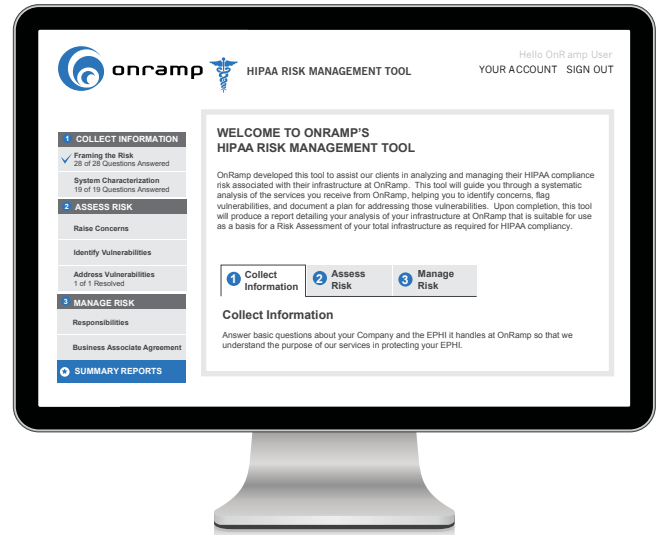

HIPAA Risk Management Tool

OUR COMPREHENSIVE 3-STEP PROCESS HELPS YOU ACHIEVE HIPAA COMPLIANCE EVERY STEP OF THE WAY

3-STEP HIPAA RISK MANAGEMENT TOOL

OnRamp specializes in working with customers to meet the rigorous HIPAA compliance requirements. We understand that meeting these compliance requirements is important, but difficult and time consuming, which is why our technical team of HIPAA implementation experts works with our customers to build comprehensive, HIPAA-compliant hosting solutions that address the confidentiality, availability and integrity of electronic protected health information. Going far beyond what's typical of most data centers, OnRamp has developed a 3-Step HIPAA Risk Management Tool, rooted in our highly secure private cloud and colocation services, to easily diagnose, assess and manage any vulnerabilities and risks to our customers' IT infrastructure at OnRamp.

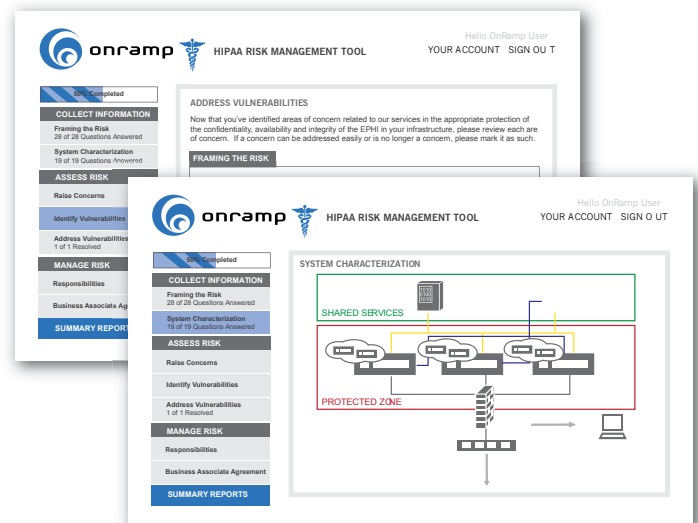

Accessible through OnRamp's healthcare portal, this proprietary online application was developed by OnRamp's team of HIPAA experts as a 3-Step HIPAA Risk Management process, to:

Upon completion of the 3-Step process, OnRamp's HIPAA Risk Management Tool produces several important outputs:

1. A report detailing the responsibilities of both the customer and OnRamp.
2. An analysis of the customer's infrastructure, including a system diagram of their IT infrastructure when hosted at OnRamp.
3. A Business Associate Agreement that documents the responsibilities of both OnRamp and the customer to collectively ensure compliance.

OnRamp works closely with each customer to design and implement systems and applications to meet HIPAA's privacy and security standards and related administrative, technical and physical safeguards. Working with OnRamp, you have a trusted partner in ensuring that your IT infrastructure is HIPAA compliant.
